### EDUCATION

*University of Crete / University Bernard Lyon I / Foundation of Research & Technology Hellas*  
Ph.D. in Experimental Physics(1996)  
Dissertation: " Interaction of ultrashort intense laser pulses with metallic surfaces "

*University of Crete*  
M.Sc. in Atomic and Molecular Physics (1992)

*University of Crete*  
B.Sc. in Physics (1990)

## MAIN RESEARCH ACTIVITIES

- **Laser Acoustics and Optoacoustics** (Ultrafast nanoacoustics, Dynamic holography and electronic speckle intreferometry techniques, Material Vibrational Analysis, Nanoacoustic science and engineering for material and devices characterization, FEA techniques in nanoscale science and engineering, Music Instrument acoustics, Laser Thermomechanics, Laser acoustic sources, laser acoustic imaging)
- **Laser-Matter Interactions** (Science and engineering of ultrafast femtosecond and attosecond laser pulses, High harmonic generation from Gases, Surfaces and Plasmas, Picosecond Ultrasonics, Non-linear multiphoton, tunnel and field ionization of atoms, ultrafast dicossiation of molecules, Laser Plasma Science, High Power Laser Secondary Sources and Applications, Laser Plasma Accelerators)

## SCHOLARSHIPS AND FELLOWSHIPS:

- 1996-1990      *Merit scholarship during BSc, University of Crete*
- 1990-1992      *Merit scholarship during MSc, University of Crete*
- 1992            *Greece-Hungary bilateral agreement scholarship for research @ KFKI institute in Budapest*
- 1992-1996      *Research student Fellowship during PhD, Forth/IESL*
- 1993            *Erasmus scholarship for attending the first quantum optics school*
- 1994            *Erasmus scholarship for attending the EPS school on Lasers and Applications*
- 1994-1995      *PhD student Scholarship “PLATON” of French Embassy in Greece for PhD Research @University Bernard Lyon I*

## ACADEMIC POSITIONS

- 2020-today      *Elected Member of the Coordinating Committee of Institute of Plasma Physics and Lasers*
- 2018- today      *Elected Vice-Rector of Hellenic Mediterranean University*
- 2016-2017      *Elected Chairman Department Music Technology and Acoustics*

## MAIN RESEARCH – ACADEMIC PROJECTS

|            |   |
|------------|---|
| 2019-today | <b>CarbonMusic - T2ΕΔΚ-01484, Research-Innovate-Create Project, fiber made Bouzouki design,</b> The project's aim is the design and manufacture of carbon fiber music instruments. The use of carbon fibres intended to make it easier to manufacture quality musical instruments without, the problems caused by unpredictable factors such as unevenness in the construction materials (eg wood) and their sensitivity to environmental conditions (eg humidity, temperature, etc.). It will also allow for a clear reduction in production costs offering benefits for many students of musical instruments. For this purpose, a carbon fiber bouzouki model will be created in which all the checks and improvements will be carried out so that the final standard will have the same acoustic quality as a corresponding wooden (traditionally made) bouzouki. At the end of this research, the first carbon made bouzouki will be ready to enter the market and pave the way for the development of other traditional carbon fiber music instruments, offering an increased added value to the Greek economy. In addition, it will contribute in the promotion of these instruments and of our the musical tradition. Grand Total budget: ~ 600 000,00 €. HMU grand ~200.000,00 €. Scientific director |
| 2019-today | <b>XMMaS - T1ΕΔΚ-04549, Research-Innovate-Create Project, Development of a coherent X-ray multispectral microscopy system,</b> The  |

*proposal aims to the development of a system for multispectral microscopy in the region of “soft” X-rays, based on research achievements of: (a) the Institute of Plasma Physics & Lasers of the HMU (IPPL/HMU), on the generation and characterization of ultrafast laser-generated high harmonics, (b) the Technical University of Crete (TUC-HMMY), on the development of optical and optoelectronic systems, and multispectral imaging systems, and (c) on the technical expertise of the company iKnowHow (IKH) on the design, development and implementation of automated industrial systems. The application of the developed prototype system in the microscopy of micro-structured surfaces will be demonstrated, where different sized features are expected to be imaged depending on the selected wavelength range of the “soft” X-ray radiation. The final prototype system will be of very high added value and extremely useful for the fast imaging with coherent light of surface micro-structures, which until today is impossible to achieve using the existing conventional laser sources. Grand Total budget: ~ 1 000 000,00 €. HMU grand ~350.000,00 €. Scientific director*

- 2019-today **LASER-BETATRON, YOUNG RESEARCHER Research Project 1393,** (Receives the 4<sup>th</sup> grade -97.05/100- in Physical Science in Greece)  
Development of a hard X-ray source from laser-plasma electron acceleration for high definition Hard-X-ray Microscopy. Grand Total budget: ~ 41 000,00 €. HMU grand ~41 000,00 €. Scientific director
